

PRISM
(New York Partnerships for Regional Invasive Species Management)
NON-NATIVE PLANT INVASIVENESS RANKING FORM

PRISM: Long Island Invasive Species Management Area

Scientific name: Galium odoratum (L.) Scop. (Asperula odorata L.) USDA Plants Code: GAOD3
 Common names: Sweet bedstraw
 Native Distribution: Europe, temperate Asia
 Date Assessed: October 30, 2008
 PRISM Assessors: Steven Clemants, Gerry Moore
 PRISM Reviewers: LIISMA SRC
 Date Approved: 8 July 2009 Form version date: 13 April 2009
 New York Relative Maximum score: 47.78 Date NY assessment approved: 8 July 2009
 New York State Invasive Rank: Low

SUMMARY OF PRISM RANKING RESULTS:

Distribution:
Estimated number of infested sites:
PRISM Invasiveness Rank[§]:

A. DISTRIBUTION AND ABUNDANCE (KNOWN/POTENTIAL):

1. What is the species distribution and abundance in the PRISM?

- | | |
|--|-------------|
| A. Not present | Not Present |
| B. Occurs in three or fewer natural areas (locations that are at least ¼ mile apart) with no infested area* >1 acre or containing >100 individuals | Restricted |
| C. Present in 4–10 natural areas, or with one occupied location >1 acre or containing >100 individuals | Common |
| D. Present in >10 minimally managed areas | Widespread |
| U. Unknown | Unknown |

Answer:

Describe distribution:
 One record from Suffolk Co. from 1972.
 Sources of information:
 Brooklyn Botanic Garden, 2008; Weldy & Werier, 2005.

[§]Not Assessable: not persistent in the PRISM, or not found outside of cultivation.

*Definition of “infested area” is the “...actual or percentage of land occupied by [canopy cover of] weed plants” NAWMA (North American Weed Management Association) 2002. North American Invasive Plant Mapping Standards (see <http://www.nawma.org/>).

PRISM
(New York Partnerships for Regional Invasive Species Management)
NON-NATIVE PLANT INVASIVENESS RANKING FORM

2. What is the likelihood the species will occur (if not yet present) or expand its distribution and abundance (if already present) in the PRISM?

Answer: Very likely

Documentation (e.g.: history of establishment in PRISM, suitability of habitats and climate, distribution models, literature, expert opinions):
Suitable habitat, climate.
Sources of information:
Brooklyn Botanic Garden, 2008; Weldy & Werier, 2005.

B. INVASIVENESS RANK IN THE PRISM:

Is the species distribution Widespread or Common?

Yes: Go to column A in table below.

No: What is the likelihood of species occurrence or expansion? Answer: Very likely

- Very Likely: Use column A below
- Moderately likely: Use column B below
- Unlikely: Use column C below
- Zero likelihood Invasive potential Insignificant
- Unknown Invasive potential Unknown
- Not assessed Invasive potential not assessed

Assign a PRISM invasiveness rank to the species based on its New York Relative Maximum Score, using the designated column in the table below.

| New York Relative Maximum Score | New York Invasiveness Rank | A | B | C |
|---------------------------------|----------------------------|-----|-----|-----|
| > 80.00 | Very High | VH | H | M |
| 70.00–80.00 | High | H | M | L |
| 50.00–69.99 | Moderate | M | L | Ins |
| 40.00–49.99 | Low | L | Ins | Ins |
| <40.00 | Insignificant | Ins | Ins | Ins |

Column used: A (Insert PRISM Invasiveness Rank on page 1)
