

PRISM
 (New York Partnerships for Regional Invasive Species Management)
NON-NATIVE PLANT INVASIVENESS RANKING FORM

PRISM: Long Island Invasive Species Management Area

Scientific name: Lobelia chinensis Lour. USDA Plants Code: LOCH4
 Common names: Chinese lobelia
 Native Distribution: Asia-Pacifica
 Date Assessed: 9 June 2009
 PRISM Assessors: Steve Glenn, Gerry Moore
 PRISM Reviewers: LIISMA SRC
 Date Approved: 24 June 2009 Form version date: 13 April 2009
 New York Relative Maximum score: 36.99 Date NY assessment approved: 24 June 2009
 New York State Invasive Rank: Insignificant

SUMMARY OF PRISM RANKING RESULTS:

Distribution: Not Present
Estimated number of infested sites: 0
PRISM Invasiveness Rank[§]: Insignificant

A. DISTRIBUTION AND ABUNDANCE (KNOWN/POTENTIAL):

1. What is the species distribution and abundance in the PRISM?

- | | |
|--|-------------|
| A. Not present | Not Present |
| B. Occurs in three or fewer natural areas (locations that are at least ¼ mile apart) with no infested area* >1 acre or containing >100 individuals | Restricted |
| C. Present in 4–10 natural areas, or with one occupied location >1 acre or containing >100 individuals | Common |
| D. Present in >10 minimally managed areas | Widespread |
| U. Unknown | Unknown |

Answer: Not Present

Describe distribution:
 Not documented from PRISM.
 Sources of information:
 Brooklyn Botanic Garden, 2009; Weldy & Werier, 2009.

[§]Not Assessable: not persistent in the PRISM, or not found outside of cultivation.

*Definition of “infested area” is the “...actual or percentage of land occupied by [canopy cover of] weed plants” NAWMA (North American Weed Management Association) 2002. North American Invasive Plant Mapping Standards (see <http://www.nawma.org/>).

PRISM
(New York Partnerships for Regional Invasive Species Management)
NON-NATIVE PLANT INVASIVENESS RANKING FORM

2. What is the likelihood the species will occur (if not yet present) or expand its distribution and abundance (if already present) in the PRISM?

Answer: Very likely

Documentation (e.g.: history of establishment in PRISM, suitability of habitats and climate, distribution models, literature, expert opinions):

Based on habitats it has been reported from in NY and PA, the LIISMA and Lower Hudson PRISMs would seem to be the most likely PRISMs where this species could occur.

Sources of information:

Author's (Moore's) pers. comm.

B. INVASIVENESS RANK IN THE PRISM:

Is the species distribution Widespread or Common?

Yes: Go to column A in table below.

No: What is the likelihood of species occurrence or expansion? Answer: Very likely

- Very Likely: Use column A below
- Moderately likely: Use column B below
- Unlikely: Use column C below
- Zero likelihood Invasive potential Insignificant
- Unknown Invasive potential Unknown
- Not assessed Invasive potential not assessed

Assign a PRISM invasiveness rank to the species based on its New York Relative Maximum Score, using the designated column in the table below.

| New York Relative Maximum Score | New York Invasiveness Rank | A | B | C |
|---------------------------------|----------------------------|-----|-----|-----|
| > 80.00 | Very High | VH | H | M |
| 70.00–80.00 | High | H | M | L |
| 50.00–69.99 | Moderate | M | L | Ins |
| 40.00–49.99 | Low | L | Ins | Ins |
| <40.00 | Insignificant | Ins | Ins | Ins |

Column used: A (Insert PRISM Invasiveness Rank on page 1)
